CLEAN CARS®

Mark VII Mini-Tunnel

Boost your
car wash business

 **Mark VII**
CLEAN CARS®

Why a Mini-Tunnel?

1

Limited Space

Even with limited space you can still offer a car wash with a fully equipped tunnel (starting at 37 ft.).

2

Customer Satisfaction

Drive efficiency by reducing your customers' wait time without sacrificing overall wash quality.

3

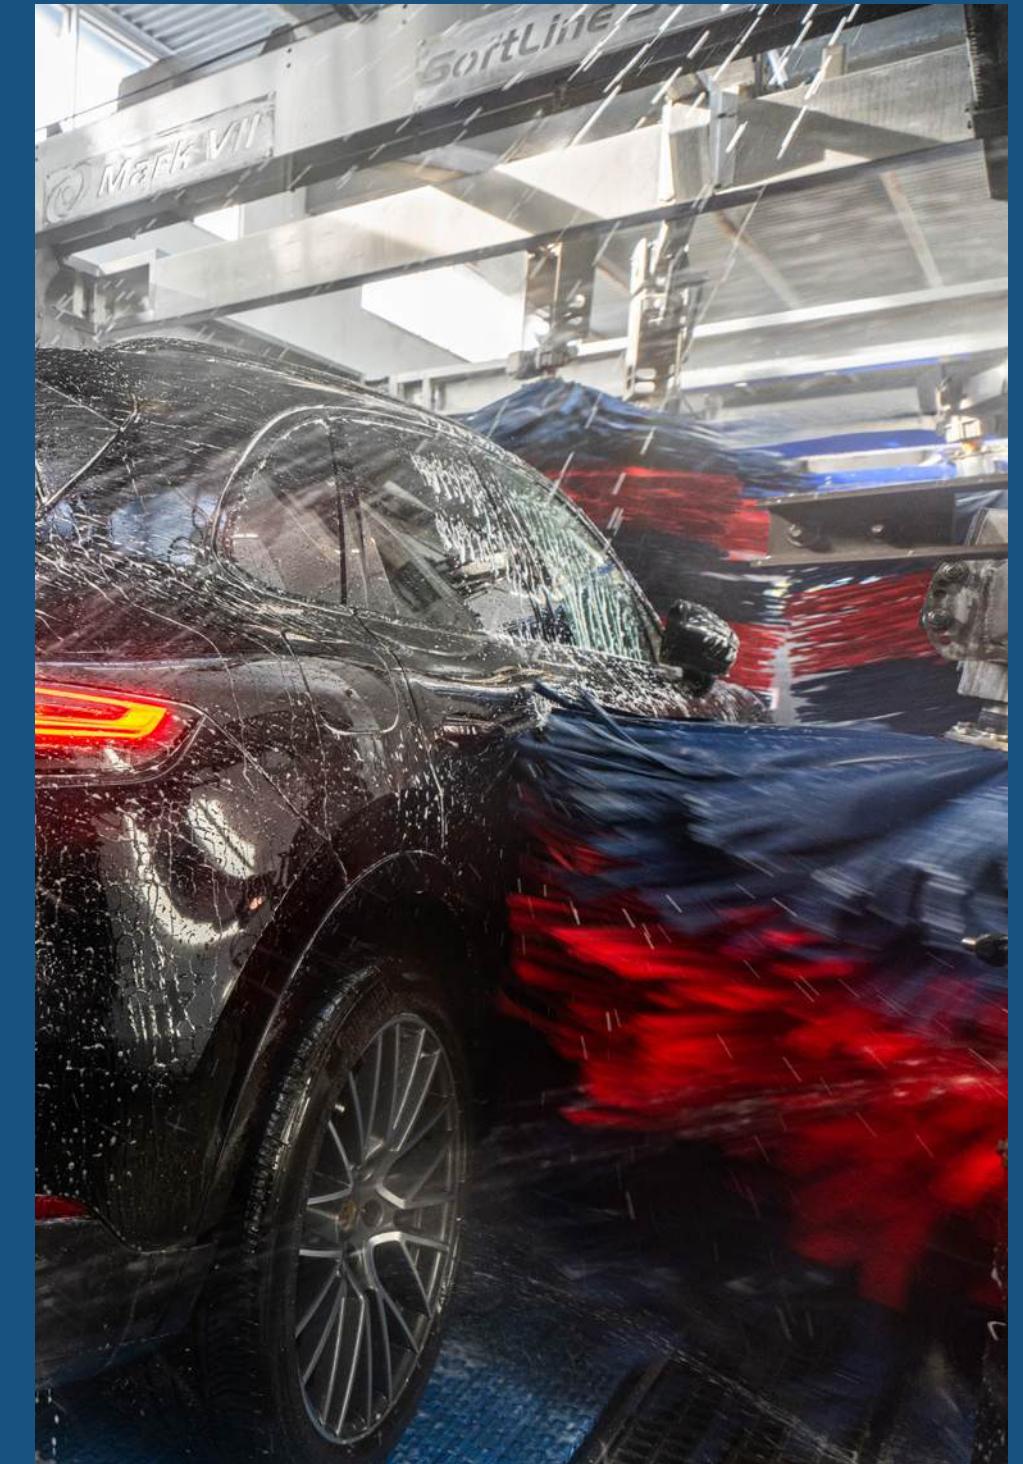

Wash More Cars

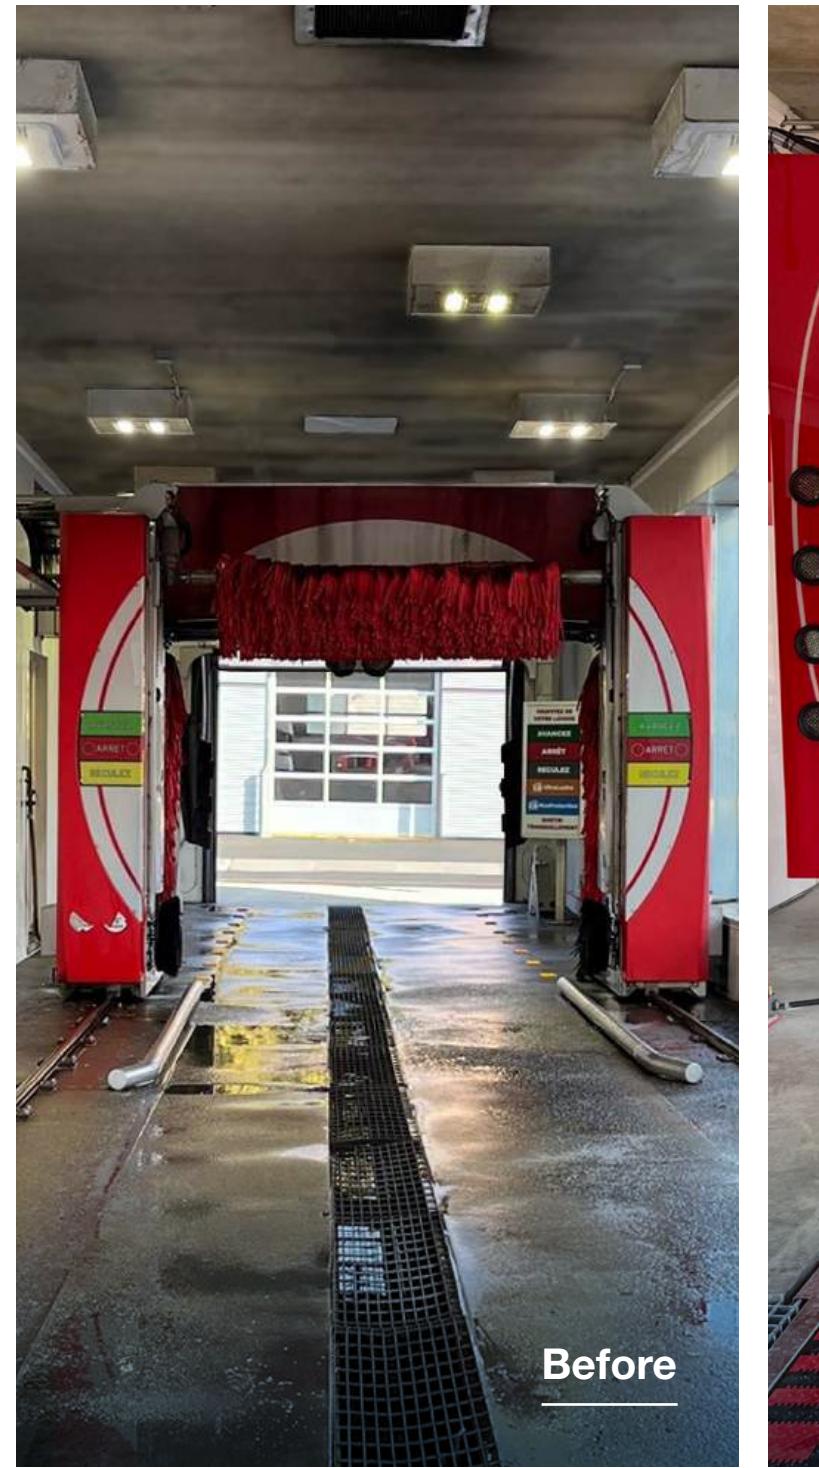

Designed for high throughput and an outstanding wash experience.

4

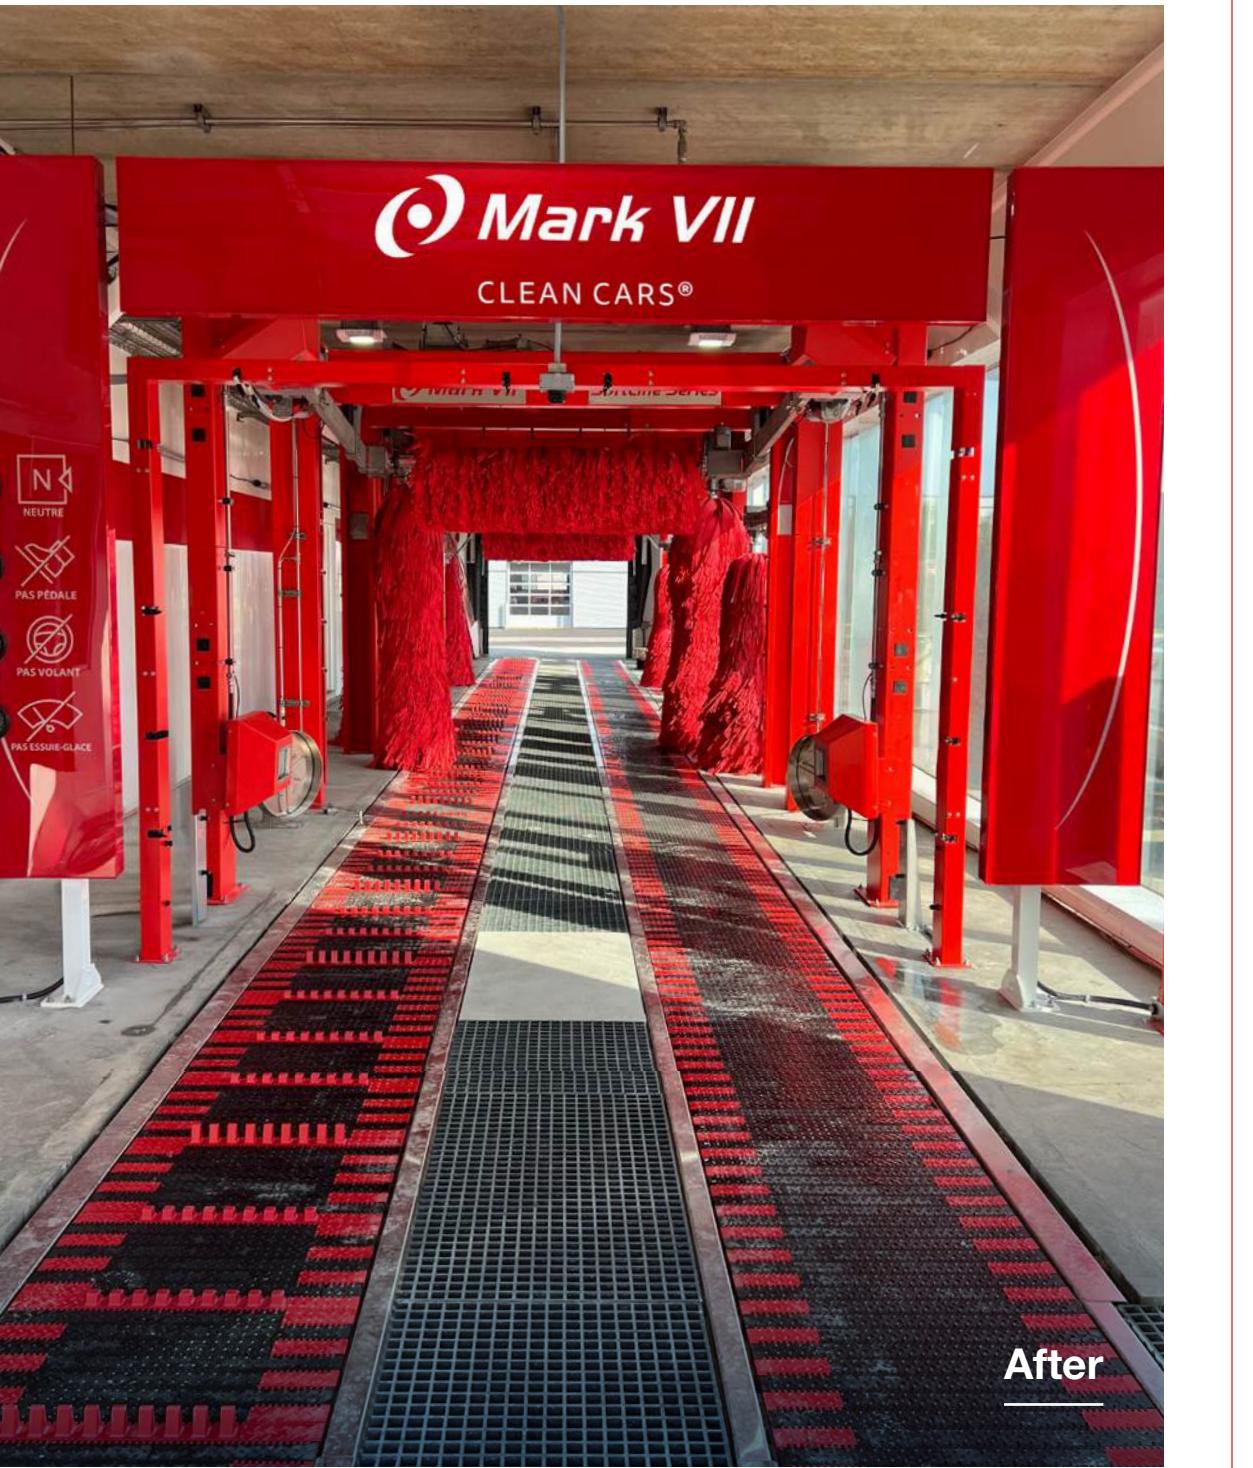

Loyal Customer Base

Implement membership programs to build up a loyal customer base to drive traffic to your site.

Before

After

Why convert my existing IBA into a Mini-Tunnel?

More throughput = Higher profit

Boost your throughput by having the ability to efficiently wash several cars at one time. This can lead to more cars washed per hour.

Enhance convenience

The ability to wash more cars faster means less wait time for your customers.

Stay competitive

Ensure the long-term success of your business by staying ahead of market trends and attracting new customers that prefer tunnels.

Offer membership programs

Increase your customer base by implementing a membership program and benefit from repeat business.

What do I need?

01

Space requirement

Bay length > 40 ft.
Bay width > 15 ft.
Bay height > 12 ft.
Straight pile lane of advantage.

02

Car wash potential

Recommended for more than 1,200 car washes/month and IBA at capacity with frequent long lines and bottlenecks on busy hours.

03

Power

Approx. 450 A at 208 V for a compact tunnel system including backroom equipment.

04

Water / Sewage

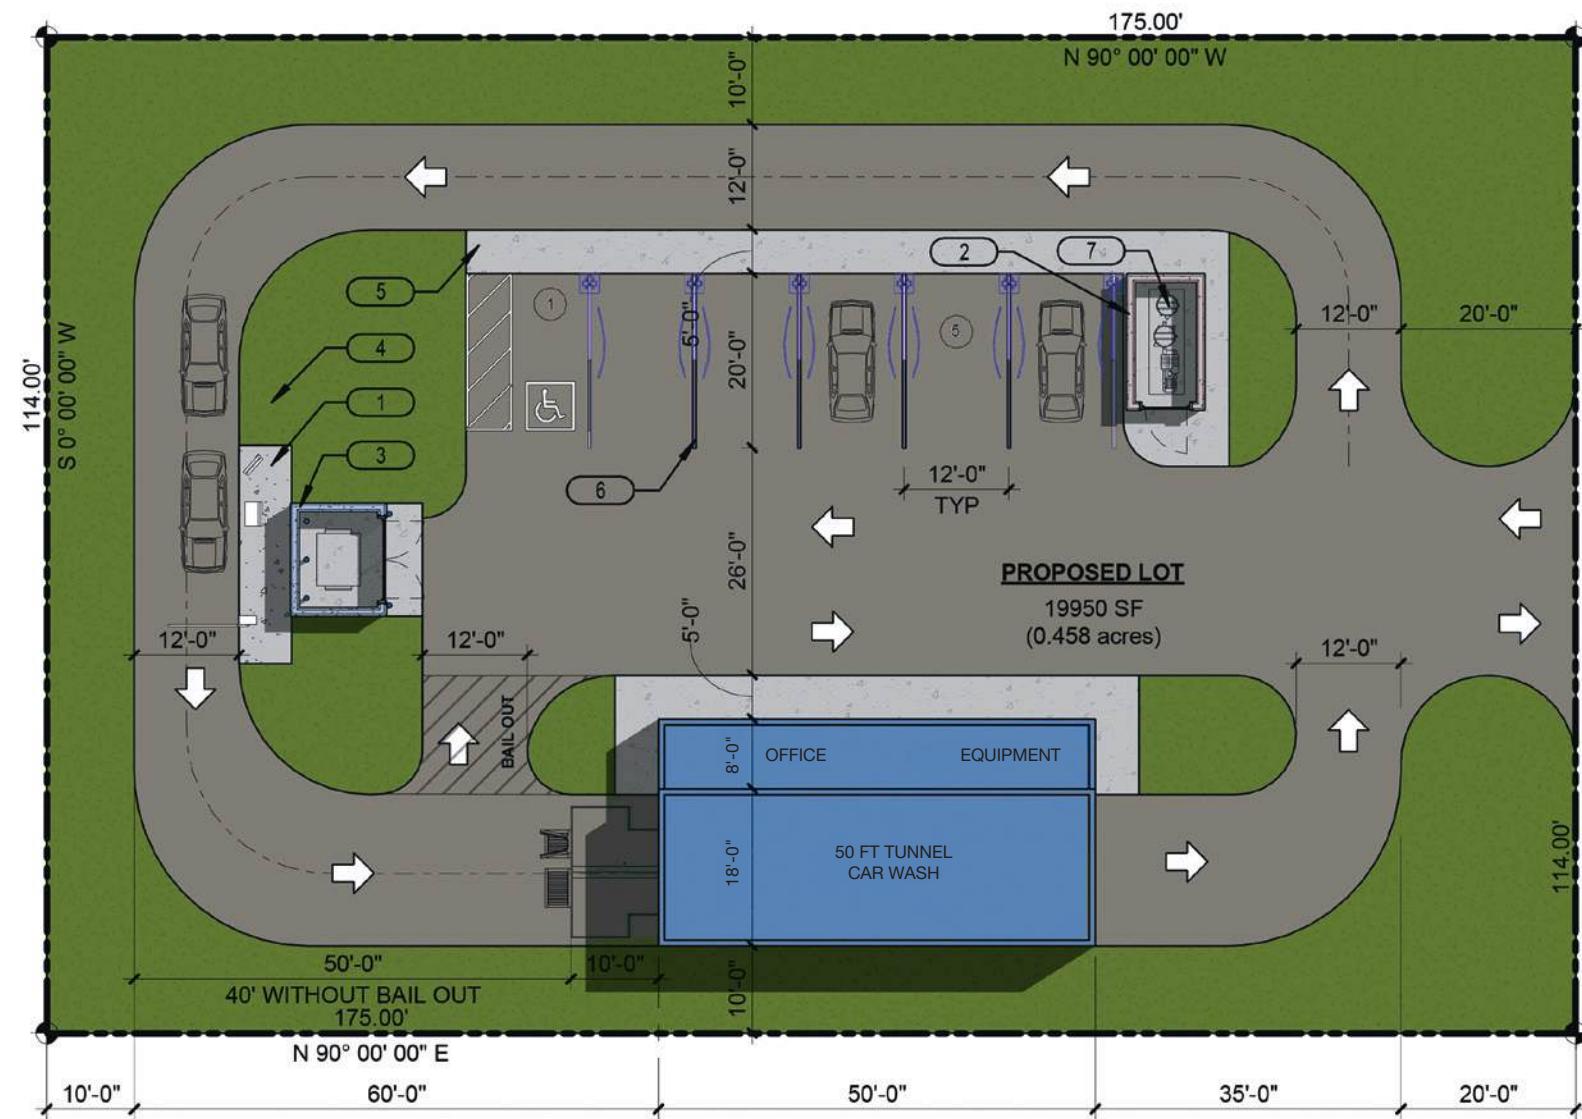

Approximately 75 gpm with a mix of fresh and reclaim water (estimate 18 g/ car of fresh water).

05

Type of operation

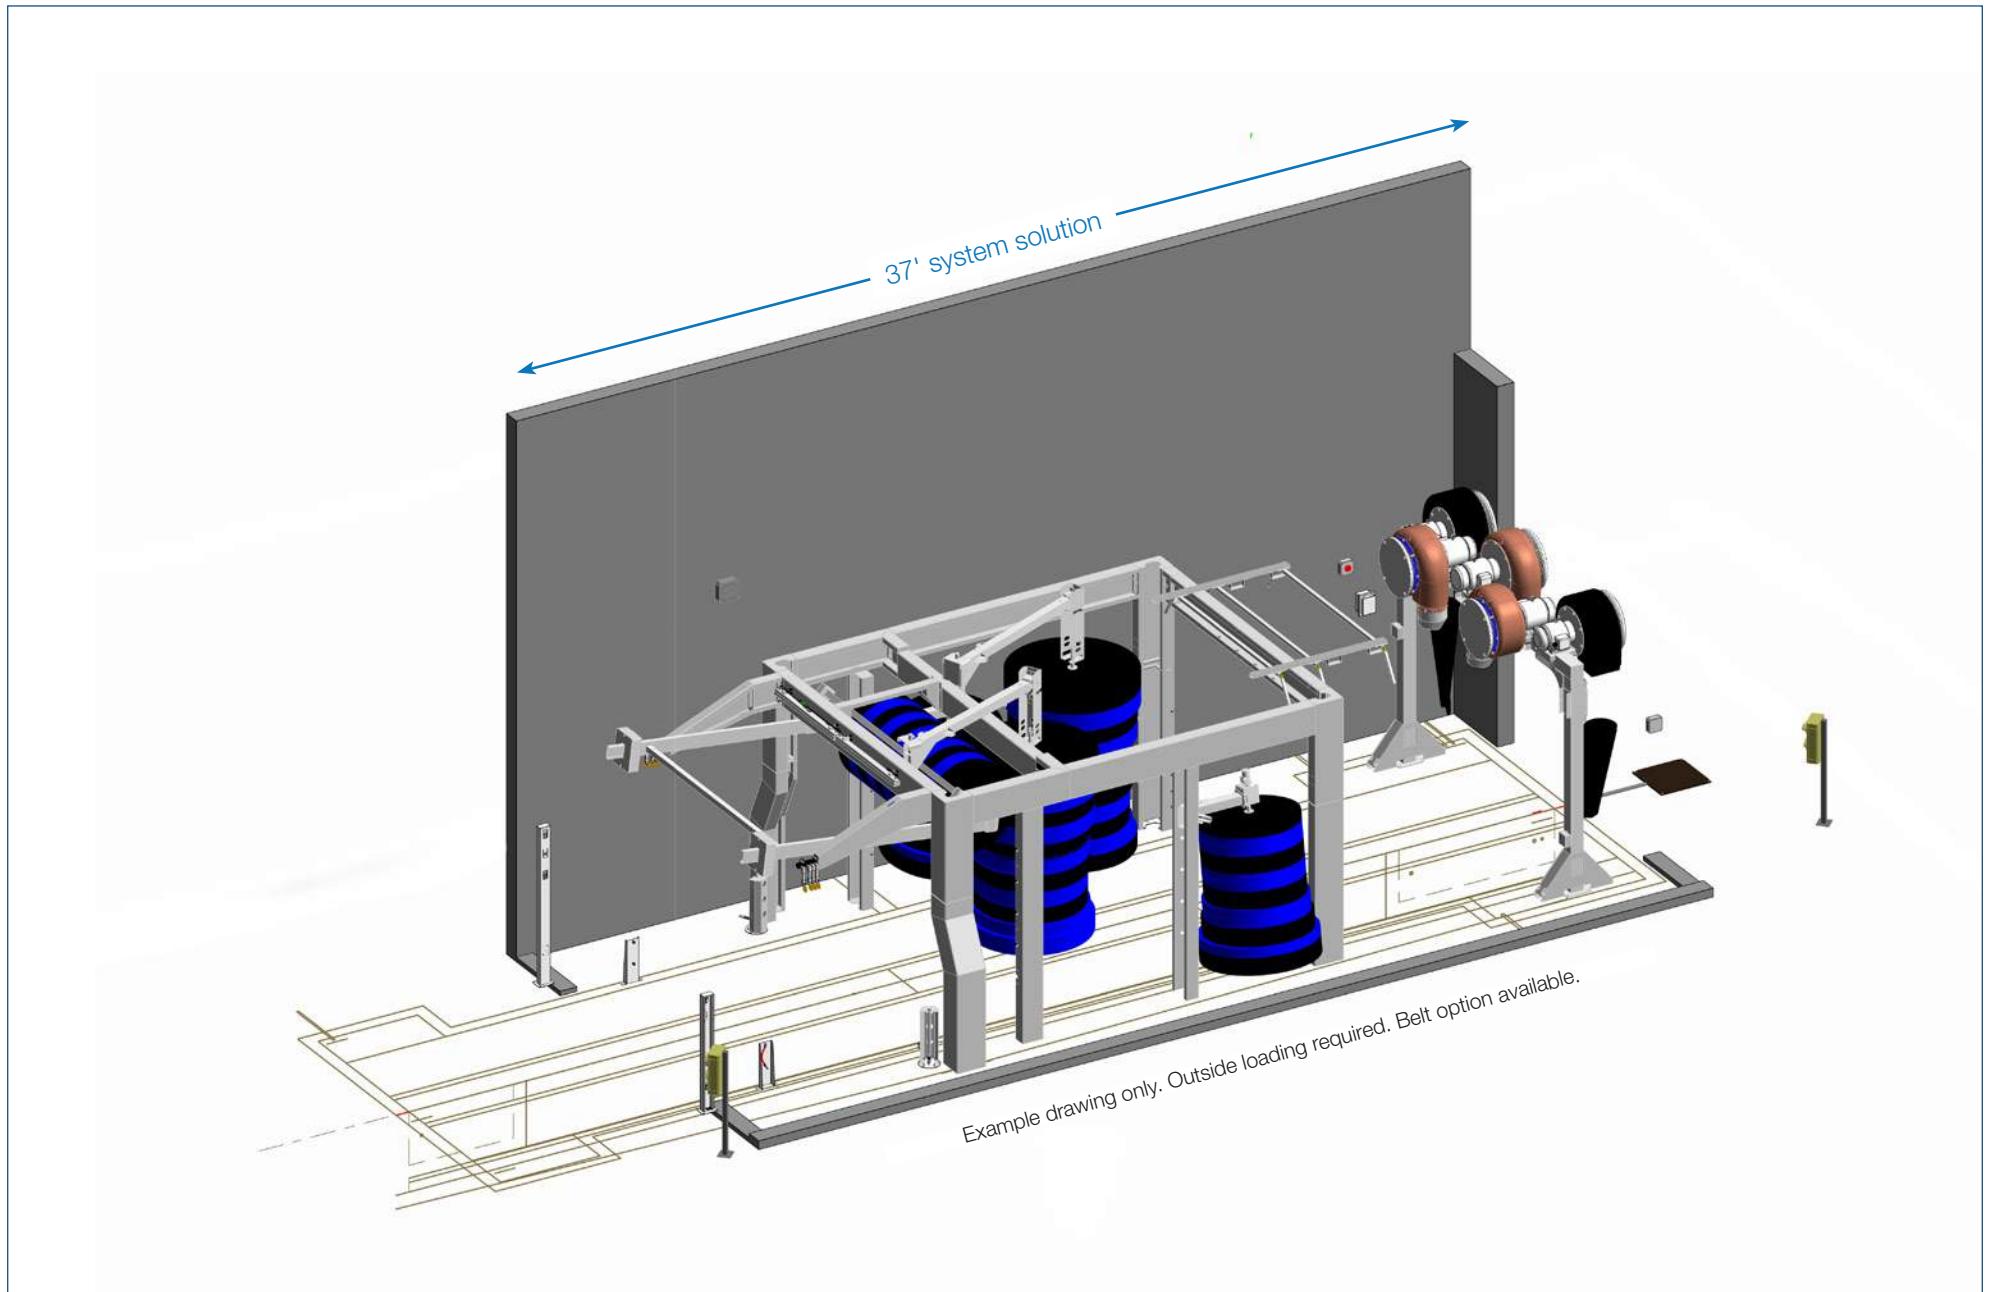

Manned / Unmanned

Site example

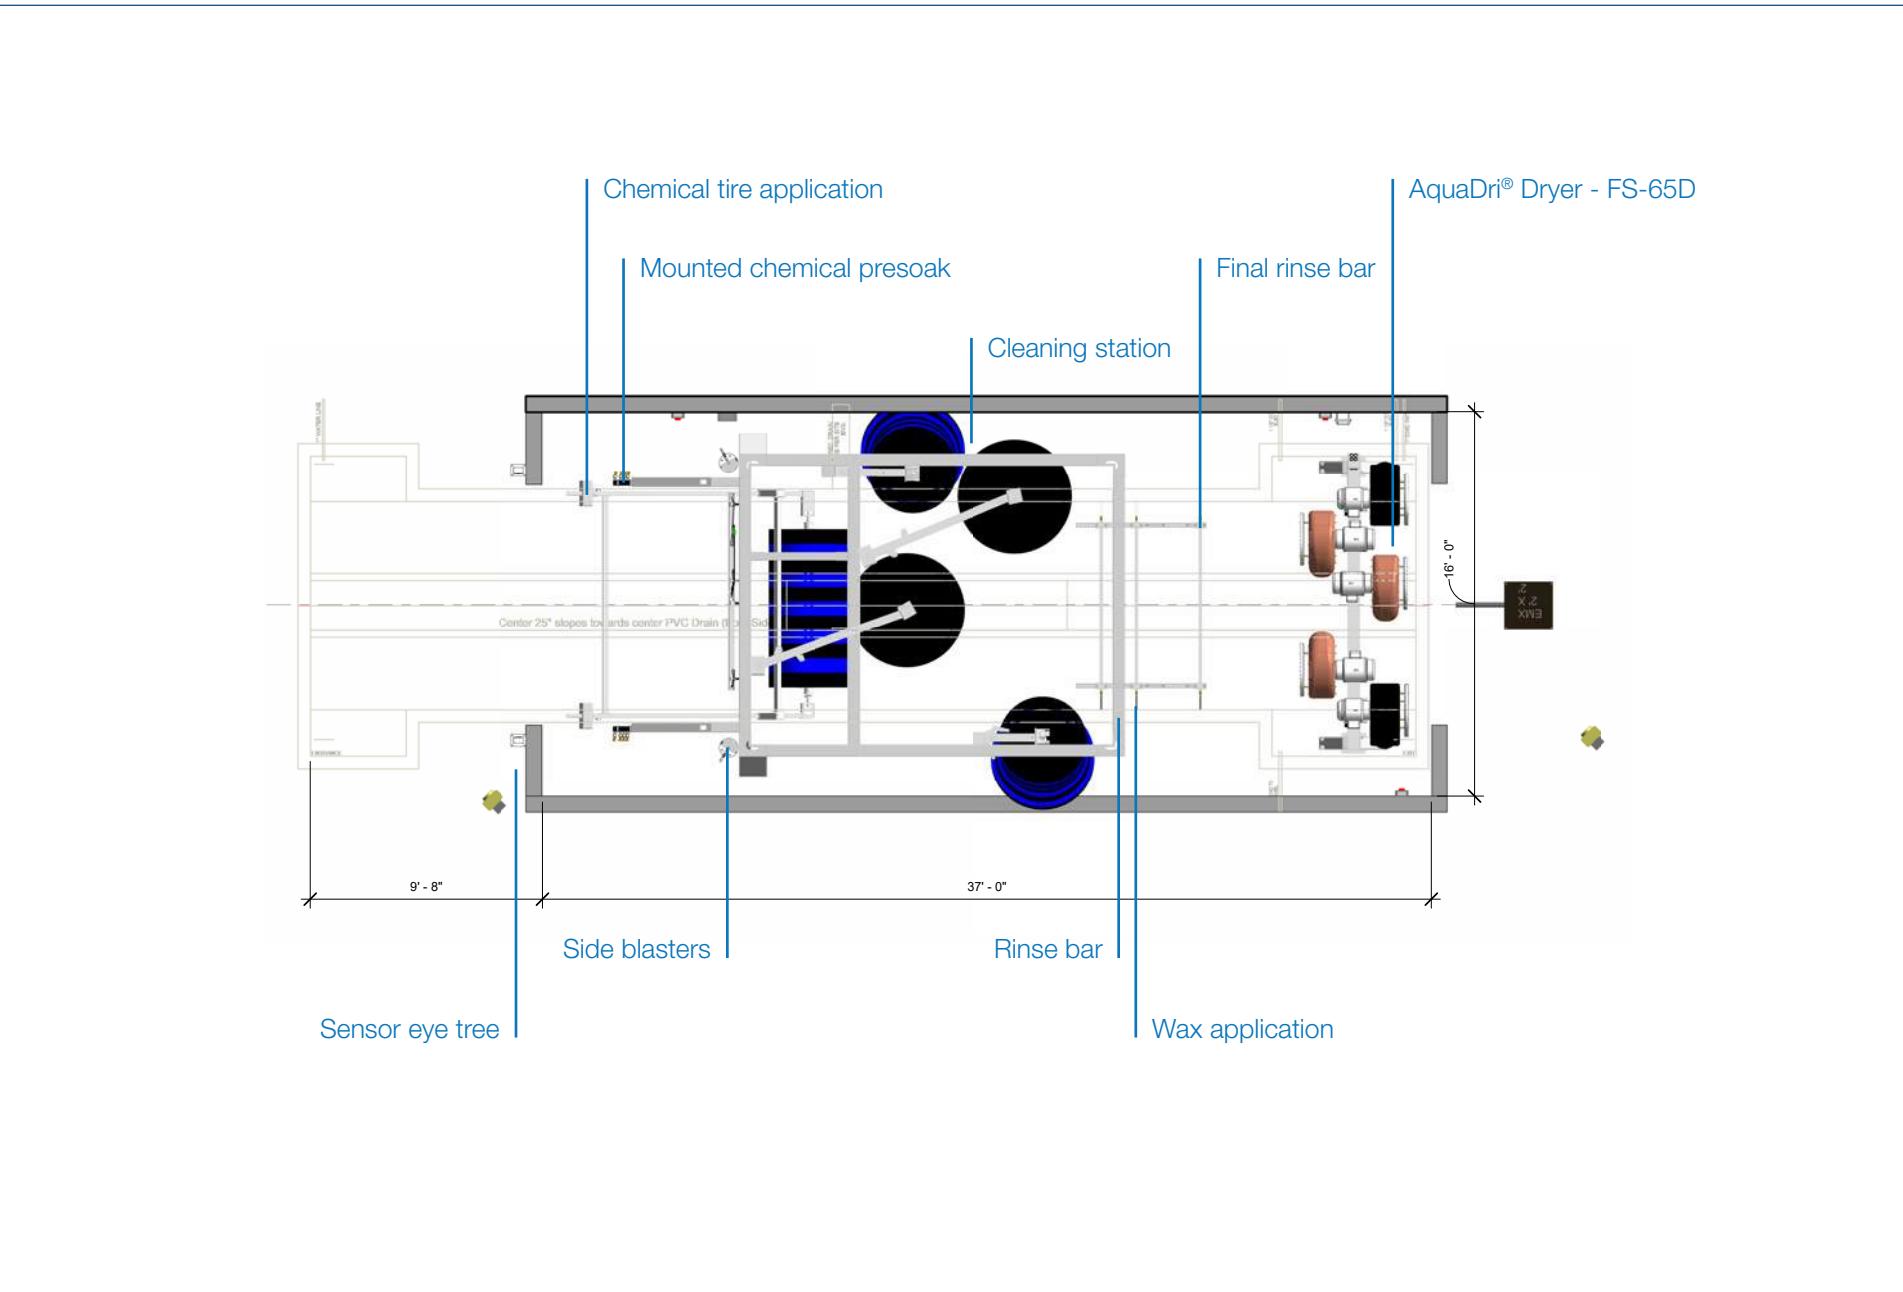

Example with outside loading and belt conveyor, other options are available.

Why a Mark VII Mini-Tunnel?

Premium long-term investment

Based on high-quality German engineering, our tunnel equipment is built in Arvada, Colorado. The robust stainless steel frame made to be durable, sturdy, and corrosion resistant.

Prioritize safety

Smart Brush Control ensures smooth contact of all brushes on the vehicles. Torque control monitors each motor continuously and retracts automatically within milliseconds in case of brush stalls. This leads to a significant decrease in troubleshooting and damage claims.

Outstanding wash quality

The brush station is equipped with a dual arm roof brush for best-in-class cleaning results, no safety hazards for open bed pickups (compared to mitter curtains) and 57" diameter side wrap brushes. Our patented SofTecs® foam brushes cover every part of the vehicle for outstanding wash quality. Smart Brush Control independently applies equal brush pressure to the shape of the car.

Why choose Mark VII as your business partner?

The Mark VII Chemical Experience

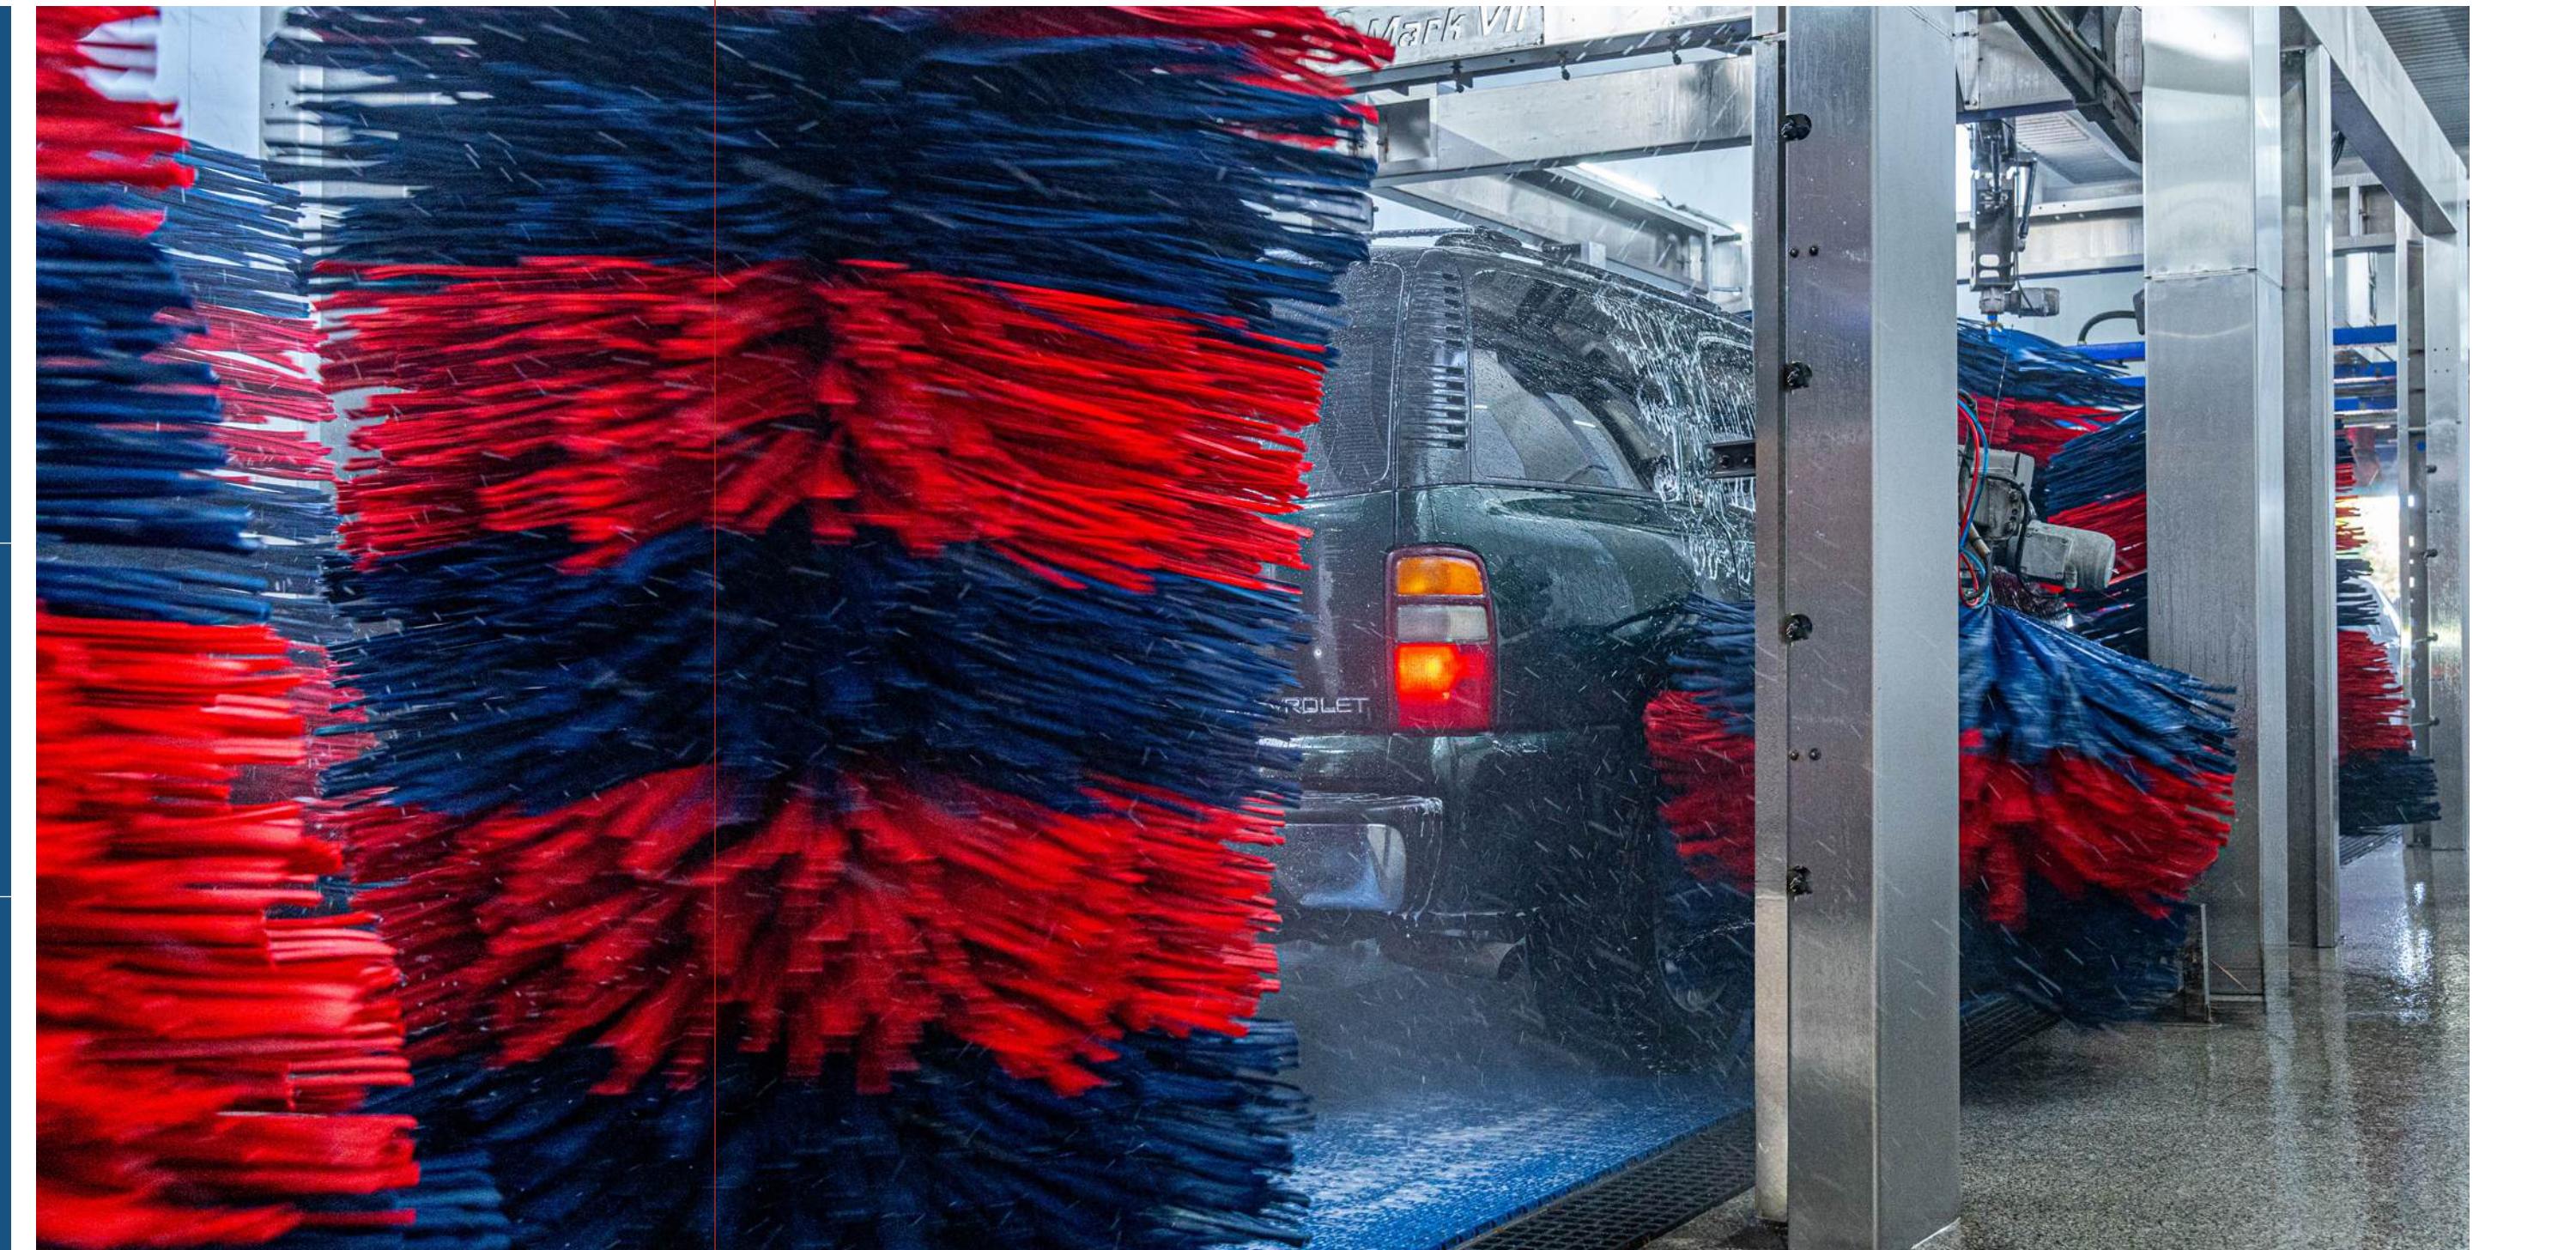

With included refill checks, chemical performance monitoring and a “don’t run out” out guarantee, our Advanced Chemical Plan gives you time and resources to focus on your business and avoid tedious chemical tasks.

The Mark VII Service Experience

With your car wash business now thriving, you need to ensure uptime is maximized. Our Advanced Service Plans offer the support of factory-trained field service professionals including travel, labor, parts, and planned maintenance – for a monthly flat fee or cost-per-car plans available.

The Mark VII Business Experience

As part of the WashTec Group we have been washing cars since 1962 with a current install base of more than 40,000 car wash sites worldwide, serving 4 million customers each day.

Why is a Mini-Tunnel the perfect fit for your convenience store?

1

Increase traffic

More car wash traffic will create more in-store traffic. This means you not only benefit from higher car wash turnovers but also boost your in-store sales. Adding more value to your location will increase customer frequency.

2

Cross marketing

Apply a promotional strategy to target customers in your store or at the gas pumps with offers for your car wash (or vice versa). You can cross market your different services to reach new and broader audiences.

3

Unmanned operation

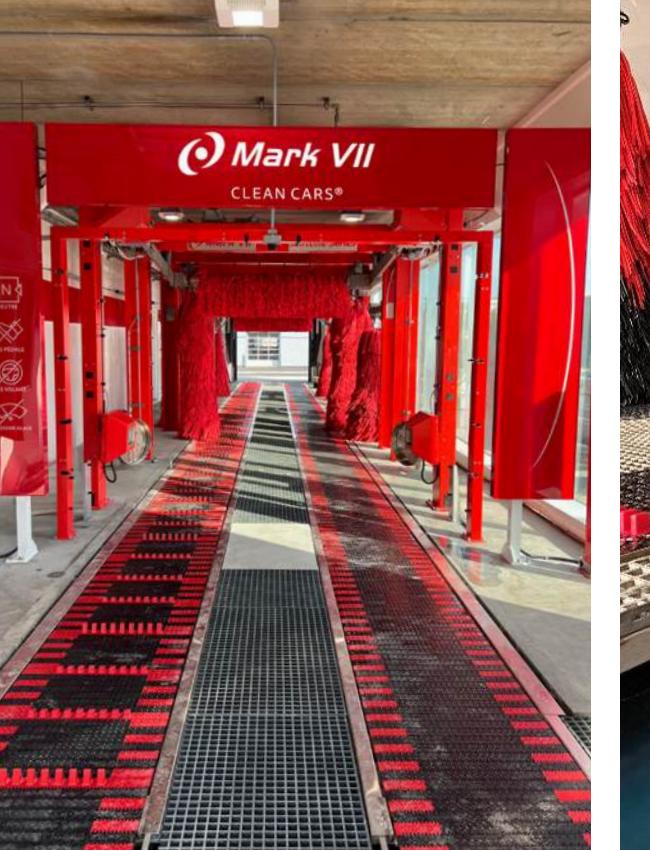

Instead of relying on dedicated staff on site for the Mini-Tunnel you can also configure your site for an unmanned operation. Contact us and we will be happy to discuss the details with you.

How can you convey the cars?

Roller – over / under conveyor

The industry standard for more than 30 years. Durable, easy to maintain and heavy duty equipment.

Dual belt – in ground installation

Highest customer convenience with a slick and modern look for high-end car wash tunnels.

Dual belt – above ground install

Innovative and cost-effective solution that offers the benefits of the dual belt without the need for a pit – ideal for conversions of IBA to Mini-Tunnel.

What else do I need?

01

Modern, fast, and reliable payment systems before the bay, in the store or at the pump are key for a successful business.

02

Build up a loyal customer base by adding a membership solution to your offering using an app, RFID or LPR.

03

Convenience first: Clear, modern, and effective signage helps with direction before, in, and after exiting the bay.

04

Boost your customer experience with more lighting to create a welcoming, engaging and safe atmosphere in your bay.

05

Increase your competitive advantage by offering additional services on your site like free vacuums.
